# 1 Introduction to DVD Ripper Platinum

# 1.1 Welcome

Welcome to **DVD Ripper Platinum**! Thank you for purchasing this product. It is an all-in-one DVD backup and ripping tool, which helps to convert the audio and video files on a DVD disc into other formats, including AVI, MPEG, WMV, DivX, RM, MOV, MP4, MPEG-4 AVC, PSP MPEG-4 AVC, 3GP , MP3, WAV, WMA, AAC, M4A, MP2, etc.

Meanwhile, it provides a good many of configurable parameters for audio and video file formats. You can adjust parameters of object file such as bit rate, resolution and channels as you need. It also allows the editing of ID3v1 and ID3v2 labels for WMA and MP3 audio formats. Moreover, it allows conversion of specific clips/chapters on a DVD disc. The user can also choose required channels, subtitles and angles.

DVD Ripper Platinum will bring you a more convenient watching and hearing enjoyment!

# Supported sources

DVD-video discs DVD file folders IFO files

# Supported targets

# Video

MPEG (mpg, mpeg, dat, vob); WMV; ASF; AVI; QuickTime (mov, qt); MPEG4 (mp4); 3GP; DV (dv, dif); Real Video (rm); Animated GIF (gif - encoding only); Macromedia Flash (swf - encoding audio only)

# Audio

MPEG Audio (mp2, mp3); WMA; WAV; AU; MPEG4 Audio (m4a); Real Audio (ra); OGG; AAC (aac); Raw AC3 (ac3); NUT Open Container Format (nut)

# Supported codecs

# Video codecs

- WAV Waveform Audio (\*.wav);
- WMA Windows Media Audio (\*.wma).

# 1.2 Features

- > Converts DVD-video into other video format files
- Extracts audio from DVD videos
- > Supports the conversion of the whole movie or certain title or chapter of a DVD
- > Converts any clip or segment by setting the start point and duration as you like
- > Supports the playing of DVD contents
- > Supports the modification of parameters for video and audio codec
- Supports the editing of ID3v1 and ID3v2
- > Supports the viewing of parameters of original files
- > Supports the setting of the zooming mode for output movie
- > Supports the setting of the splitting mode for output movie
- > Supports the selection of audio tracks, subtitles and angles of output movie
- > Supports the setting of the name for output movie
- Supports advanced settings, including audio, video, luminance filter, subtitle, DeCSS and DVD-ROM cache.
- Supports copy protection removal
- > Supports multi-threading and batch conversion
- > Supports multiple languages including simplified Chinese and English
- Supports skin change

# 2 Install DVD Ripper Platinum

# 2.1 System requirements

- > Operating system Windows NT/2000/XP/2003 or above
- > Processor 750MHz Intel, AMD CPU or above
- > Available HD space 100 MB or more
- > ROM drive at least one DVD-ROM drive
- > Display Super VGA (800 x 600) resolution or higher

# 2.2 Installation

Step 1: Download the installation package for DVD Ripper Platinum from http://www.Xilisoft.com.

**Step 2:** Double-click "x-dvd-ripper-platinum.exe" to start installation.

**Step 3:** Follow the instructions to finish the installation.

# 2.3 Uninstallation

# Method 1:

**DVD Ripper Platinum** provides an uninstall function. By using it, you can easily delete all the files, program groups or shortcuts created with **DVD Ripper Platinum**.

To do this, click "Start > Programs > Xilisoft > DVD Ripper Platinum" in turn, and then click the "Uninstall" item.

Follow the instructions to finish the uninstall.

# Method 2:

Of course, you can also click the "Add > Remove Programs" in the Control Panel of your Windows system, select **DVD Ripper Platinum** in the "Add/Remove Programs" window and then click the "Delete" button to completely uninstall the program.

# 3 Getting started

# 3.1 Starting the application

After installation of **DVD Ripper Platinum**, you can start the application by one of the following methods:

### Method 1:

Select the "DVD Ripper Platinum" program group in "Start > Programs> Xilisoft" and then select "Xilisoft DVD Ripper Platinum" option to start the application.

### Method 2:

After installation, an icon with the name of **Xilisoft DVD Ripper Platinum** will be automatically created on your desktop. Double-click the icon to run the application.

# 3.2 Quick start

### Step 1: Load DVD

In the main interface, click the button to load the DVD-video disc or DVD directory that you wish to convert to the program list. In the pop-up dialogue box, select the DVD disc or DVD directory that your wish to convert, and then click "OK" to load the DVD.

Moreover, by selecting the "File > Add DVD Folder (Or Add IFO Files)" option or the "Add DVD Folder (Or Add IFO Files)" in the right-click menu on the program list, you can also add DVDs to the program list.

Hint: You can also import IFO files that you wish to convert into the program list by clicking the

button.

### Step 2: Check the programs that you wish to convert

After loading, all programs of the DVD are checked by default.

If you only wish to convert certain portion of the DVD, you can re-check the programs.

Moreover, by pressing the button on the main interface, you can get all the titles of the DVD and all the included chapters of each title displayed in the program list. Then, you can check the chapters that you wish to convert in the program list.

Moreover, during conversion, you can click the button on the main interface to pause the

conversion, or the button to stop the conversion.

#### Step 7: Finish conversion

After the conversion is done, click the open... button on the main interface to open the

Destination and view the conversion results.

**Hint**: **DVD Ripper Platinum** has a built-in "PSP Video Manager" function. After conversion, you can easily import PSP video files into PSP devices.

For more information about the "PSP Video Manager", please refer to the "<u>Main Menu>Tools</u> <u>Menu</u>" in "<u>Operating Instructions</u>".

If the output file is in iPod MP4 format, you only need to click the **Open...** button and, in the Destination, copy or drag the required files into your iTunes.

# 3.3 How to configure DVD source file control panel

**Step 1:** Run **DVD Ripper Platinum**, load a DVD-video disc or import an IFO file and then select the programs that you wish to edit in the program list.

# 3.4 How to customize "Profile"

Besides the "Profiles" provided by the software, you can also customize your own "Profile" according to your needs. Moreover, you can save, rename and delete the custom "Profile". To do this:

**Step 1:** Run **DVD Ripper Platinum**, add and select the files that you wish to convert, select "Profile" and then modify the properties in the output property list.

Step 2: After the modification, you can save the modified "Profile" in a customized manner. Click

the Save As... button on the main interface. In the pop-up dialogue box, enter a name for the

custom "profile". Click "OK" to confirm the operation and close the dialogue box. At this time, the custom "profile" will be added to the "Profile" drop-down list for future use.

E <u>x</u> it				

#### Add DVD Folder

Click to open the "Select DVD file" dialogue box. Then select the required DVD disc or DVD folder. After loading, all programs of the loaded DVD will be displayed in the program list.

#### Add IFO Files

Click to open the "Select IFO file" dialogue box. Then select the required IFO file. After importing, all programs of the imported IFO file will be displayed in the program list.

### **Rip All Checked**

Click to start the conversion of all the checked programs in the program list.

#### Pause All Checked

During conversion, click the "Pause All Checked", the conversion of all the checked programs in the program list will be paused.

#### Stop All Checked

During conversion, click the "Stop All Checked", the conversion of all the checked programs in the program list will be stopped.

#### **Rip Selected**

Clicking the item will automatically check and convert the selected programs in the program list.

#### **Pause Selected**

During conversion, clicking the "Pause Selected" item will pause the conversion of the selected programs in the program list.

#### **Stop Selected**

During conversion, clicking the "Stop Selected" item will stop the conversion of the selected

programs in the program list.

E<u>x</u>it

Exit the application.

	Check All Children Check All UnCheck All Children Uncheck All

#### Select All Children

In the program list, select a required program. Click "Select All Children" item, all its children programs will be selected.

### Select All

Select all the programs in the program list.

#### Rename

Rename the title of a selected program in the program list.

#### Remove

Remove the selected program from the program list.

#### Clear

Clear the program list.

### Check

Check a selected program in the program list.

#### Uncheck

Uncheck a checked program in the program list.

### **Check All Children**

In the program list, check a required program. By clicking "Check All Children" item, all its children programs will be checked.

### Check All

Check all the programs in the program list.

### Uncheck All Children

Uncheck all the checked children programs of a selected program in the program list.

### Uncheck All

Uncheck all the checked programs in the program list.

# 4.2.3 Settings menu

<u>F</u> ile Edit	Settings Tools Help
	Change Skin
	Language D
	Preferences

### Change Skin

Open the "Change Skin" dialogue box to select the desired skin for the software.

# Language

Click the "Language" item and then select the desired language from its submenu.

# Preferences

Open the Preferences tab, where you can modify the preferences for the application and you can also set the properties for DVD source files, such as audio, video, luminance filter, subtitle, DeCSS and DVD-ROM cache.

For more information about the setting, please refer to the "<u>Preferences tab</u>" in "<u>Operating</u> <u>Instructions</u>".

# 4.2.4 Tools menu

	✓ Er ✓ Er	nable video while playing Rendering: YUV 💌	
	Outp	ut	
	vo Vo	reate chapter folder in output folder reate album folder in output folder	
		OK Cancel	

# Rip

Here you enter a number respective for maximum simultaneous processes and maximum simultaneous running processes for **DVD Ripper Platinum**.

**Note**: By setting the maximum simultaneous processes and maximum simultaneous running processes, the multi-threading technology can be used to increase conversion efficiency of the software.

**Hint**: The number should not be too large. If it is too large, considerable time will be spent on process scheduling, leading to efficiency decrease. Besides, the maximum simultaneous running processes should be equal to or less than the maximum simultaneous processes.

By default, the maximum simultaneous processes = 10; the maximum simultaneous running processes = 1.

Meanwhile, you can also set "Skip checked title in chapter mode" in the tab.

If the checkbox is checked, checked titles would no longer be converted. Otherwise, checked titles would be converted.

Note: Chapter mode refers to the display mode in which the title and all its chapters are displayed

in the program list.

For more information about the "Chapter mode", please refer to the <u>"Button bar</u>" in "<u>Operating</u> <u>Instructions</u>"

#### Preview

#### Preview window aspect ratio

Set the aspect ratio for the preview window. Two options are available: "16: 9" and "4: 3".

#### Rendering

Select the rendering method for the video being played in the preview window. Two options are available: "YUV" and "RGB".

Meanwhile, you can also decide whether to play video or audio while playing the program.

### Output

Here you can determine whether to create chapter folder and album folder in the output folder while setting output programs.

# 4.3.2 DVD (Global)

	AUGO
Output Frame Rate:	Downsampling:
Keep original 💙	No downsampling
Detect progressive 24 Hz	Volume 3 Detect
Audio / Video synchronisation Deinterlace Filter: Interpolate v DCT:	Save your DVD drive Size (MB): 10

Each VOB ID	Offset: 0
Subtitle Offset (pixel): 0	

Xilisoft Corporation,2007

# Video

# **Output Frame Rate**

Set output frame rate for video files. Five available options: "Keep original", "23.976(NTSC)", "24", "25(PAL)", "29.97(NTSC)", "30".

**Hint: DVD Ripper Platinum** will not automatically set this option. If you set a frame rate different from that of the source program, the converted program will have the set frame rate. Besides, please avoid the conversion between different television systems, such as conversion between NTSC and PAL, or between PAL and NTSC.

Default: Keep original

### **Detect progressive 24Hz**

Automatically detect progressive 24Hz sources. Detected source frame rates will be displayed in the main interface.

Default: checked

### Force progressive 24Hz

Force the source to be a progressive 24Hz source

**Hint:** The "Force progressive 24Hz" box is only checkable when the "Detect progressive 24Hz" box is checked.

If you think the detection result incorrect, you may consider checking the option.

Default: unchecked

### Audio/Video synchronization

If this box is checked, audio and video signals will be synchronized again according to the cycle.

**Hint**: if you have selected values different from the source program in previous options, please check the box to ensure audio/video synchronization of the output program.

Default: unchecked

### **Deinterlace Filter**

If the source program is interlaced, while you wish to deinterlace to generate a progressive program, please check the box.

The interpolation (interpolating even field) will definitely work. However, it will also compromise some picture quality when making formats such as SVCD.

Default: Interpolate

### iDCT

Set Inverse Discrete Cosine Function Transform.

MMX is the fastest and is suitable for most CPUs, while FPU provides the best quality.

Default: Automatic detection of local CPU

# DeCSS

Simply leave the original default value for DeCSS unchanged. It needs the installed ASPI to perform drive authentification and read files over 1GB in a DVD.

If you get a confused video, please try to change the mode for Key Search.

#### Key search

Set the mode for CSS key search.

Default: Once

#### **DeMacroVision**

Check the box to remove the macro vision protection of the movie.

Default: checked

### Subtitle

#### Offset(pixel)

Set the pixel offset in vertical direction for subtitles.

If the subtitle is displayed outside the screen area, **DVD Ripper Platinum** will automatically adjust the value for the option.

#### Default: 0

**Hint:** When setting "Offset" values, a positive value indicates a downward offset, while a negative value indicates an upward offset.

#### **Original colors**

Check the box to keep the original subtitle color.

If the original subtitle is too dark, please do not check the box.

Default: checked

Besides, you can also determine whether to keep the original color of a subtitle. If the original subtitle is relatively dark, it is recommend that you don't need to keep original colors.

### Audio

### Downsampling

Note: DVD audios generally have a sample rate of 48000Hz or 44100Hz (with certain exceptions,

of course), while actually such a high sample rate is not necessary for most of the times (meanwhile, certain devices do not support ultra high sampling rates). Therefore, you can decrease the sample rate by downsampling. Downsampling can be realized together with bit rate. Of course, the bit rate can be kept unchanged during downsampling.

Downsampling provides the following modes:

Normal quality 48.0KHz to 44.1KHz (fastest)

High quality 48.0KHzto 44.1KHz (very slow)

No downsampling

44.1KHz (no conversion) -- If your source program has a 44.1KHz audio, and you wish to keep the rate unchanged after conversion, please select this mode.

48.0KHz (no conversion) -- If your source program has 48.0KHz audio, and you wish to keep the rate unchanged after conversion, please select this mode.

Default: No downsampling

### Volume

Set volume for output audio.

For most DVDs, the default volume is already sufficient.

Besides, you can use the Detect button at the right side of the Volume option to detect the real time volume of source DVD. For example, you can detect a clip that you think it has a high volume and, according to the obtained volume value, enter a proper value for the Volume option.

Default: 3

# **Dolby Surround**

If the box is checked, the better 5.1FX will be maintained in the stereo.

Default: checked

# Save your DVD drive

Set an amount of temporary buffer cache to avoid frequent read/stop of DVD-ROM.

Typically RAM will be set as temporary buffer cache so that the conversion will be faster. Of course, you can use hard disk space as temporary buffer cache.

Typically, files will be saved in a temporary system directory. Therefore, before conversion, please make sure that there is available temporary directory.

Default: Cache size = 10MB; location = RAM.

# Luminance filter

Set luminance of the program.

If the box is checked, luminance rendering will be used.

**Hint:** use luminance filter to modify the gain value. If the gain is less than 128, the image will become darker; when higher than 128, it will become lighter. (Typically gain values are multiples of 64, for example: 0 = 0.0; 128 = 1.0; 256 = 2.0)

The Offset is based on the gain.

Default: unchecked (i.e., gain: 128; offset: 0)

# 4.4 DVD source file control panel

Audio:	English DTS 6ch (0x88)	~	Subtitle: N	lone	~	Angle:	1	$\mathbf{v}$
Album:	E:\\			Title	Chapter 1			

In the DVD source file control panel, you can set the Audio, Subtitle, Angle, Album and Title for DVD source files.

#### Audio

Select the audio that you wish to convert for a selected title or chapter.

By default, the first option of the drop-down menu is selected.

#### Subtitle

In the drop-down menu, select the required subtitle, which will be the output subtitle for a selected title or chapter.

By default, None is selected.

#### Angle

Select the required shooting angle for a DVD.

Note: The angle only applies to selected titles.

Most of the movies are saved in angle 1.

By default, 1 is selected.

#### Album

Edit the name of your favorite album.

Hint: The Album option only applies to selected DVD-ROM root directory.

By default, it is set as the DVD-ROM drive letter.

#### Title

Set the desired title name as the output title for the selected title or chapter.

If neglected, the default source title name will be the output title name.

# 4.6 Button bar

# "Open DVD" button

Add a DVD-video disc or a DVD folder that you wish to convert to the program list.

Add IFO files that you wish to convert to the program list.

Edit" button

Click the Edit button. In the pop-up drop-down menu, you can select various editing functions of **DVD Ripper Platinum**, as indicated in the following figure:

Remove Clear	Del
Rename	F2
Check Uncheck	
Check All Children Check All UnCheck All Children Uncheck All	
Select All Children Select All	Ctrl+A

# "Show/Hide Chapters" button

Click the button to show/hide the chapters under a title.

**Note:** when is displayed, the chapters will be shown.

When is displayed, the chapters will be hidden.

# Start Ripping" button

Clicking the item will start the conversion of all the checked programs in the program list.

#### "More Ripping Options" button

Clicking the button, a drop-down menu pops up.

In the menu, more ripping options are available as indicated in the following figure:

# 4.7 Output control panel

Profile:	Archos AV700 (*.avi)				*	Save As	-
Zoom:	Full (Keep aspect ratio)	*	Split:	Infinite	*	Configure.	
Destination:	D:\documents\test\video				Browse	Open	

In the output control panel, you can set the output format, zooming mode, splitting mode and destination for output programs. Moreover, you can manage custom profiles and view the directory where the files are saved.

#### Profile

Select a profile for the output program in the drop-down menu.

For more information about "Profile", please refer to the "Supported profiles" in "Set Profile".

#### Save As

Click to open a dialogue box where you can save your custom profiles.

Besides, select a custom profile in the drop-down menu and click the drop-down button at the right

side of side o

Save: save your custom profile

Rename: rename your custom profile

Delete: delete your custom profile

Hint: The three operations only apply to custom profiles.

#### Zoom

Select the zooming mode for output programs, as indicated in the following figure:

Letterbox	
Medium	
Pan and Scan	
Full (Keep aspect ratio)	

Letterbox: add black stripes at both sides of the source program

Medium: cut the source program while adding black stripes

Pan and Scan: cut the source program

#### Full: stretch the source program

#### Split

Select a splitting mode for the output program in the drop-down menu, as indicated in the following figure:

Infinite 650MB Recordable CD 700MB Recordable CD 800MB Recordable CD 4.7GB Recordable DVD Custom size (100.00 MB) Custom time (00:10:00)

Infinite: output according to duration of the source program

**650MB Recordable CD:** split the source program with the maximum size of a single output file being 650MB

**700MB Recordable CD:** split the source program with the maximum size of a single output file being 700MB

**800MB Recordable CD:** split the source program with the maximum size of a single output file being 800MB

**4.7GB Recordable DVD:** split the source program with the maximum size of a single output file being 4.7GB

**Custom size:** split the source program according to custom size; maximum size of a single output file is defined by the user

**Custom time:** split the source program according to custom duration; maximum duration of single output file is defined by the user

Default: No splitting

#### Destination

Set the destination directory where the output files are saved

For more information about the "Destination", please refer to the "<u>How to set the Destination</u>" in "<u>Getting started</u>".

#### Open

Click to open the folder where output files are saved and view the results of conversion.

For more information about the Open button, please refer to the "<u>How to view conversion result</u>" in "<u>Getting started</u>".

# 4.8 Status bar

frame=208 q=0.0 size=1950kB time=6.8 bitrate=2344.2kbits/s

During conversion, through the status bar, you can easily view the information about the program that is currently being converted.

Moreover, by clicking the 🔢 button at the right side of the status bar, you can open the Log

dialogue box and view the conversion log for a selected program, as indicated in the following figure:

Disable Audio							

After setting profiles for output programs, in the output property list that is located on the right side of the main interface, you can further configure specific parameters for a selected profile. These include general properties for audio and video formats, audio properties, video properties and ID3 label properties.

For more information about "Set output properties", please refer to the "<u>Common output property</u> <u>list</u>" in "<u>Set Profile</u>".

# 4.10 Preview player

Using the preview player, you can view a selected program in the program list.

# "Move to start" button

Jump to the start of the program that is being played

### "Move to end" button

Jump to the end of the program that is being played

### "Play" button

Play a selected program

### "Backward" button

Jump to the previous second

### "Forward" button

Jump to the next second

### "Jump" button

Click to open a dialogue box where you can set the playing position

# 5 Advanced Operational Skills

# 5.1 Adding multiple DVDs

In order to save your time, **DVD Ripper Platinum** supports the adding of multiple DVDs in one conversion.

If you have more than one DVD-ROM or virtual drive on your computer, all you have to do is to add the DVDs that you wish to convert, select required profiles for different chapters or titles, and then click the Convert button. **DVD Ripper Platinum** will start the conversion automatically. You can do something else at the same time.

# 5.2 Customizing "Profile"

If you have modified parameters for a profile during conversion and you wish to continue to use them in the future, **DVD Ripper Platinum** allows saving the modified profile as a new profile. By doing this, you can use the new profile whenever you want.

Moreover, for the custom "Profile", **DVD Ripper Platinum** provides operations such as Save, Rename and Delete.

For more information about the "Customizing Profile", please refer to the "<u>How to customize</u> <u>"Profile"</u>" in "<u>Getting started</u>".

# 5.3 Supporting H.264

5 profiles that support H.264 video codecs are added to **DVD Ripper Platinum**'s profile list. They are PS3 Video(1080P) MPEG-4 (\*.mp4); PS3 Video(480P) MPEG-4 (\*.mp4); PS3 Video(720P) MPEG-4 (\*.mp4); PS3 Video(480P) MPEG-4 HD (\*.mp4) and PSP AVC Video Format (\*.mp4).

By using these profiles in encoding, the encoding data speed can be up to 30Mbit/s and the supported image pixel is ranged from 96x80 to 1920x1072, which provide you with more and better choices.

**Note:** At present, H.264 video codecs have only processed macroblocks of 16. Therefore, the width and height of a video need to be multiples of 16. For example, if you wish to output a video of 1080, please make sure that the video's height is 1072 or 1088 and the width is 1920.

**Hint:** If you wish to select a profile higher than 720P, please make sure that the source is DVD disc or folder in high definition (HD) format.

# 5.4 Changing the position of subtitle

With DVD Ripper Platinum, you can change the position of the subtitle of a video.

During preview, if you find that the subtitle is not in a proper position, you can use this function to change its position. You can also preview the results in the preview player.

Original subtitle

Subtitle after being moved

For specific operations pertinent to the function, please refer to the "<u>Preferences tab>DVD</u> (<u>Global</u>)><u>Subtitle</u>" in "<u>Operating Instructions</u>".

# 5.5 When connecting an iPod to a TV to play videos, we recommend

# "iPod Video (640x480) MPEG-4 Video"

**DVD Ripper Platinum** provides two profiles, "iPod Video (320x240) MPEG-4 Video" and "iPod Video (640x480) MPEG-4 Video", to support the conversion for iPod devices.

If you wish to connect an iPod to a TV to play videos and your iPod supports 640x480, we recommend "iPod Video (640x480) MPEG-4 Video".

# 6.2 Common output property list

Parameter	Description
General	Set general encoding properties, including duration and start time.
	Set encoding duration.
	The default value is "full", which means the full duration of the source program.
Dunation	If you wish to convert a portion of the program, please set the duration for the
Duration	portion.
	For example, if you wish to convert the program from 00:00:50 to 00:02:50 in a title
	or chapter, please set the duration to: 120s or 00:02:00.
	Set a start time for encoding.
	The default value is "00:00:00", which means the conversion starts at the
	beginning of the source program.
Start Time	If you wish to convert a portion of the program, please set the start time for the
	portion.
	For example, if you wish to convert the program from 00:00:50 to 00:02:50 in a title
	or chapter, please set the start time to: 00:00:50.
Video	Set video properties for output files.
	Set video codec.
Video esdes	In normal cases, please keep the default settings.
video codec	For certain exceptional profiles, we provide various encoding algorithms. Please
	make your choice according to your needs.
	Set video standard (PAL, NTSC).
Standard	Please ensure that the setting is the same with the source program.
	For example, if the source is in "PAL" standard, please set the value to "PAL".
Video sizo	Set the video frame size (WxH).
VIGEO SIZE	It is recommended to select a value not more than that of the source program.
	Set video bit rate (unit: Kbit/s)
	After the profile is determined, the bit rate is set by default.
Bit rate	It can be modified according to "program properties".
	For example: if higher quality is required, then larger bit rate should be selected.
	Size of the output file will be increased accordingly.
Max. Bit Rate	Set the peak bit rates for output programs (unit: Kbit/s).
Min Bit Pate	By jointly modifying the two values, better output quality can be achieved.
	Hint: Max. Bit Rate≥Bit Rate(already defined) ≥Min. Bit Rate
Buffer Size	Set buffer size (unit: kByte)
Builer Size	In normal cases, please keep the default value unchanged.
Eramo Data	Set the frame rate (Hz value, fraction or abbreviation).
	In normal cases, please keep the default value unchanged.
Aspect Ratio	Set the aspect ratio for playing the program (4:3, 16:9 or 1.3333, 1.7777).
Bitrate Tolerance	Set the output bit rate tolerance, i.e., the deviation from the defined bitrate.
Samo Quality	Set the option and the output program will have the same quality as the source
Same Quality	program.

Disable Video	Set the option and the video stream of the output program will be shielded.				
Audio					
	Set audio codec. (If it is set to "Copy", then the stream will be copied)				
<b>A</b>	In normal cases, please keep the default settings.				
Audio codec	For certain exceptional profiles, we provide various encoding algorithms. Please				
	make your choice according to your needs.				
	Set audio bit rate (unit: kbit/s)				
	After the profile is determined, the bit rate is set by default.				
Bit rate	It can be modified according to "program properties".				
	For example: if higher quality is required, then larger bit rate should be selected.				
	Size of the output file will be increased accordingly.				
	Set audio sampling rate (unit: Hz)				
	After the profile is determined, the sample rate is set by default.				
Sample rate	It can be modified according to "program properties".				
	For example: if higher quality is required, then larger sample rate should be				
	entered. Size of the output file will be increased accordingly.				
Channela	Set the number of audio channels.				
Channels	Two options are available: 1 and 2.				
Disable Audio	Set the option and the audio stream of the output program will be shielded.				
Summony	The group of parameters becomes configurable when the profile is WMV, WMA or				
Summary	MP3.				
Title	Set the title for ID3				
Author	Set the author for ID3				
Copyright	Set the copyright information for ID3				
Comments	Set the comments for ID3				
Album	Set the album names for ID3				
Genre (Style)	Set the genre for ID3				
Composer	Set the composer for ID3				
Orig, Artist	Set the original artist for ID3				
URL	Set the URL for ID3				
Encode format	Set the encoding format for ID3				
Year	Set the year for ID3				
ID3v1	Set whether to support ID3v1 information.				
ID3v2	Set whether to support ID3v2 information.				

# 7 Technical Support

# 7.1 **FAQ**

# Q: Can I convert a DVD on which there is "Copy Protection"?

A: Yes.

During conversion, **DVD Ripper Platinum** will automatically run a background program that decodes CSS.

Besides, before conversion, you can use the "Settings > Preferences > DVD(Global)" option to set a CSS decoding method.

For more information about the "DeCSS", please refer to the "<u>References</u> <u>tab>DVD(Global)>DeCSS</u>" in "<u>Operating Instructions</u>".

# Q: Is ID3v2 supported?

A: Yes.

With **DVD Ripper Platinum**, if you have selected profiles of WMV, WMA and MP3, then you can edit ID3 labels (including ID3v1 and ID3v2) for output programs in the output property list on the right side of the main interface.

For more information about "ID3", please refer to the "Common output property list" in "Set Profile".

**Note**: ID3 information is the relevant information contained in an MP3 audio file, including the song (audio)'s title, singer, album name, year, genre and comments, etc.

ID3 information has two versions, v1 and v2. V1 ID3 is located at the end of an mp3 file, sized 128 bytes and starts with three characters of TAG followed by the information about the song. V2 is typically located at the beginning of an mp3 file, which can contain large-capacity information such as lyrics and album images.

### Q: How to change the skin?

A: Select "Settings>Change Skin" to open the "Change skin" dialogue box, where you can choose your favorite software skin.

After selection, click "OK" to close the dialogue box and apply the selected skin.

# Q: How to change the language?

A: In the drop-down menu of "Settings>Language" option, select the desired language.

After selection, all commands, functions and items in **DVD Ripper Platinum** will be displayed in the selected language.

### **Q: How to view the conversion log?**

A: **DVD Ripper Platinum** supports log view. You can easily view the conversion log during or after a conversion.

To do this:

Step 1: Select the program that you wish to view in the program list;

Step 2: Click the 🔢 button at the right side of the status bar to open the Log dialogue box. In the

dialogue, you can find the detailed information about the program before and after conversion, as well as problems that could be encountered during conversion.

See the figure below:

	Enable audio while playing				
	Create chapter folder in output folder  Create album folder in output folder				
L					
	OK Cancel				

For more information about the "Conversion processes", please refer to the "<u>References</u> <u>tab>General</u>" in "<u>Operating Instructions</u>".

# Q: How to change the aspect ratio for the preview window?

A: Select "Settings>Preferences" to open the Preferences tab. In the Preview column of the General tab, set an aspect ratio for the preview window.

See the figure below:

Preferences			
General DVD (Global) Rip Maximum simultaneous proc Maximum simultaneous runn Skip checked title in chap	esses: ing processes: ter mode	10	
<ul> <li>Preview</li> <li>Preview window aspect ratio</li> <li>✓ Enable video while playin</li> <li>✓ Enable audio while playin</li> </ul>	9: 16:9 9 9	Rendering: YUV	
Output Create chapter folder in Create album folder in ou	output folder Itput folder		
		ОК	Cancel

For more information about the "preview window", please refer to "<u>References</u> <u>tab>General>Preview</u>" and "<u>Preview player</u>" in "<u>Operating Instructions</u>".

# Q: How to set zooming modes and splitting modes for videos?

A: **DVD Ripper Platinum** has "Zoom" and "Split" options in the output control panel on the main interface. Using these two options, you can select your required zooming modes and splitting modes.

To do this:

Step 1: Select the program that you wish to operate in the program list;

**Step 2:** In the output control panel, click to open the "Zoom" drop-down menu, and selecte the required zooming mode; likewise, click to open the "Split" drop-down menu to select the required splitting mode.

After conversion, you'll get the program that you want.

For more information about "video zooming modes" and "video splitting modes", please refer to the "<u>Output control panel</u>" in "<u>Operating Instructions</u>".

# 7.2 Contact us

If you encounter any problems during the product application, please contact us for technical support by following method.

Send an email to <u>support@xilisoft.com</u>. Our customer service staff will give you a response within one (1) working day.

Besides, we would appreciate it if you could attach your conversion log along with your email. It would help us for a quick trouble-shooting.

For more information about the "conversion log", please refer to the "FAQ".

# 8 Buy DVD Ripper Platinum

# 8.1 Buy a registration code

Clicking the "Buy Registration Code" item in the drop-down menu of "Help", you can open **DVD Ripper Platinum**'s website for online purchase of the product.

<u>C</u> ontents

Enter Registration Code Feedback and Support
<u>A</u> bout

# 8.2 Registration

After purchasing, you will obtain a registration code through email. Run **DVD Ripper Platinum**. On the main interface, click the "Enter Registration Code" item in the "Help" drop-down menu to open the "Registration" dialogue box.

Registration		×				
Registration Info						
Name:						
License Code:						
	Buy Xilisoft DVD Ripper Platinum					
Tech Support						
Anytime, even you are in trail, you have hard question, you can contact our support team at						
support@xilisoft.com						
We provide free technical assistance.						
	OK Later					

Enter the user's "Name" and "License Code" and click "OK" to finish the registration and close the dialogue box.

If you click "Later", you will enter into the trial version of **DVD Ripper Platinum**.

**Hint:** With the trail version of **DVD Ripper Platinum**, you can only convert 5 minutes or less of a single program; if duration of the program is less than 5 minutes, you can only convert half.

In addition, the setting of "Duration" and "Start Time" will also be invalid.

# 9 Annex

# 9.1 Introduction to Xilisoft

Xilisoft Corporation, founded on March 28, 2004, is a well-known and professional developer dedicating to digital video and audio software developing. We develop multiple market channels based on the Internet to the people all over the world.

Xilisoft series software products are universal video and audio conversion tools. Each individual product with its multitude of functions has already won its reputation from users all over the world.

At present, there are 46 products from Xilisoft on the market. All products are released after intense research.
